Sample Questions and Answers for NT1210 Midterm Exam

Question 1: What is the purpose of the OSI model?

Answer: The OSI (Open Systems Interconnection) model provides a conceptual framework to understand and design network systems. It divides communication functions into seven distinct layers: Physical, Data Link, Network, Transport, Session, Presentation, and Application, each responsible for specific tasks, facilitating interoperability among different systems.

Question 2: How does subnetting improve network efficiency?

Answer: Subnetting divides a larger network into smaller, manageable segments, which reduces congestion, improves security, and optimizes bandwidth usage. It also simplifies network management by isolating traffic within subnets and allows for better utilization of IP address space.

Question 3: Describe the difference between a switch and a router.

Answer: A switch operates at the Data Link layer (Layer 2) and connects devices within a single network segment, forwarding frames based on MAC addresses. A router functions at the Network layer (Layer 3), connecting multiple networks and routing packets based on IP addresses. Routers also perform network address translation (NAT) and manage traffic between different networks.
