Sample Cardiac Surgery MCQs with Answers

1. Which of the following is the most common indication for coronary artery bypass grafting (CABG)?

- Severe aortic stenosis
- Multi-vessel coronary artery disease
- Atrial fibrillation
- Mitral regurgitation

Answer: 2. Multi-vessel coronary artery disease

2. Which valve is most commonly replaced during cardiac surgery?

- Mitral valve
- Aortic valve
- Tricuspid valve
- Pulmonary valve

Answer: 2. Aortic valve

Explanation: The aortic valve is the most frequently replaced valve, often due to calcific aortic stenosis or aortic regurgitation.

3. In which scenario is cardiopulmonary bypass typically used?

- During minimally invasive procedures
- In all open heart surgeries requiring cardiac arrest
- For diagnosis only
- Only in emergencies

Answer: 2. In all open heart surgeries requiring cardiac arrest

Explanation: Cardiopulmonary bypass (CPB) provides a bloodless and motionless field during open heart surgeries, allowing the surgeon to operate on a still and bloodless heart.

4. Which of the following is a contraindication for mechanical heart valve replacement?

- History of bleeding disorders
- Young age
- Presence of atrial fibrillation
- Coronary artery disease

Answer: 1. History of bleeding disorders

Explanation: Mechanical valves require lifelong anticoagulation, which can pose bleeding risks in patients with bleeding disorders, making them a contraindication.

5. What is the primary purpose of an aortic cross-clamp during cardiac surgery?

- To control bleeding from the aorta
- To isolate the heart from systemic circulation
- To stop blood flow through the aorta temporarily
- To prevent embolism

Answer: 3. To stop blood flow through the aorta temporarily

Explanation: The aortic cross-clamp is applied to halt blood flow through the aorta, allowing the surgeon to operate on a still and bloodless heart while cardioplegia solutions protect the myocardium.

Sample MCQs with Answers and Explanations

To illustrate the utility of these MCQ resources, below are some sample questions spanning different topics.

Question 1: Coronary Artery Bypass Grafting (CABG)

Which of the following grafts is most commonly used for CABG?

A) Saphenous vein

B) Internal mammary artery

C) Radial artery

D) Femoral artery

Correct Answer: B) Internal mammary artery

Explanation:

The internal mammary (thoracic) artery is preferred due to its superior long-term patency rates and resistance to atherosclerosis. While saphenous veins are commonly used, they have lower long-term success. Radial arteries are also used but less frequently as a primary graft. Femoral arteries are typically not used as grafts in coronary bypass surgery.

Question 2: Valve Replacement

Which type of prosthetic valve is associated with the highest risk of thromboembolism if anticoagulation is not maintained?

A) Mechanical valve

B) Bioprosthetic valve

C) Homograft valve

D) Autograft valve

Correct Answer: A) Mechanical valve

Explanation:

Mechanical valves are durable but require lifelong anticoagulation due to their thrombogenic nature. Without proper anticoagulation, they pose a high risk of thromboembolism. Bioprosthetic valves have lower thrombogenicity but tend to degenerate faster.

Question 3: Congenital Heart Disease

In which congenital defect is a "hole in the atrial septum" most characteristic?

A) Ventricular septal defect

B) Atrial septal defect

C) Patent ductus arteriosus

D) Tetralogy of Fallot

Correct Answer: B) Atrial septal defect

Explanation:

An atrial septal defect (ASD) involves an abnormal opening in the atrial septum, leading to left-to-right shunting of blood. VSD involves a ventricular septal opening, PDA involves abnormal ductus arteriosus, and Tetralogy of Fallot is characterized by multiple defects including VSD and pulmonary stenosis.
