Perfect Competition

- Many buyers and sellers
- Homogeneous products
- Free entry and exit
- Price takers (no control over market price)
- Examples: Agriculture markets

Monopolistic Competition

- Many sellers
- Differentiated products
- Some control over prices
- Relatively easy entry and exit
- Examples: Clothing brands, restaurants

Oligopoly

- Few large firms dominate

Sample Questions and Model Answers

To illustrate how to approach your assessment, here are some common types of questions and detailed model answers:

Q1: Describe the characteristics of a monopolistic competition market.

Answer:

A monopolistic competition market is characterized by many firms competing against each other, each offering differentiated products. Unlike perfect competition, firms in monopolistic competition have some control over their prices due to product differentiation. Entry and exit in this market are relatively easy, which helps maintain competition. Firms in this environment often engage in advertising and branding to distinguish their products. Examples include clothing stores and restaurants. The presence of product differentiation allows firms to have some price-setting power, but the free entry keeps profits normalized in the long run.

Q2: Explain how externalities can lead to market failure and suggest government policies that can address negative externalities.

Answer:

Externalities are costs or benefits of economic activities that are not reflected in market prices and are borne by third parties. Negative externalities, such as pollution from factories, impose additional costs on society that producers may not consider. This leads to overproduction of harmful goods and a misallocation of resources, constituting a market failure. To correct negative externalities, governments can implement policies like taxes equivalent to the external cost (Pigovian taxes), regulations limiting emissions, or cap-and-trade systems. These measures incentivize firms to reduce harmful activities and align private costs with social costs, leading to a more efficient market outcome.
