Entity-Relationship Diagrams (ERDs)

ERDs focus on data modeling by representing entities (objects) and their relationships, crucial for designing databases and data structures.

- **Entities:** Objects or concepts relevant to the system.
- **Relationships:** Associations between entities, such as one-to-one or one-to-many.
- **Attributes:** Descriptive data about entities.

Process Specifications

These define the detailed logic of each process identified in DFDs, often using structured English or decision tables to specify exact input, output, and processing rules.

Applying Modern Structured Analysis Yourdon in Practice
