Optimizing Performance

- Avoid unnecessary script triggers that can slow down user interactions.
- Limit the scope of scripts and calculations to relevant contexts.
- Use indexed fields for search and sort operations to enhance speed.
- Batch process data updates instead of row-by-row operations when possible.

Maintaining Security and Data Integrity

- Use security privileges to restrict access to sensitive scripts and functions.
- Validate user input at the script level to prevent invalid data entry.
- Implement audit trails with timestamp and user information using functions like `Get ( CurrentUserName )`.

Advanced Techniques and Custom Functions

FileMaker 8 supports the creation of custom functions and advanced scripting techniques to extend the capabilities of your solutions.

Creating Custom Functions

- Custom functions can be defined to simplify complex calculations and reuse logic across solutions.
- They are created using the 'Manage Custom Functions' feature, allowing parameterized, reusable code blocks.
- Example: Creating a function to calculate age based on birthdate and current date.

Using External Data and ODBC

- FileMaker 8 can connect to external databases via ODBC for data integration.
- Functions like GetAsText (ExternalDataSource::Field) facilitate reading external data.
- Scripting external data retrieval enables real-time updates and synchronization.

Integrating Scripts with User Interface
